DETAILED ACTION

1. Claims 1-10 are presented for examination.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

3. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Drawings

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, **the capacitor in claims 8-9** must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate

Application/Control Number: 10/607,634

Art Unit: 2818

changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

capacitor as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of

Art Unit: 2818

the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

7. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Nguyen (U.S. Patent No. 6,429,686).

Regarding claims 1, 4,6, Nguyen discloses a semiconductor memory device (Figure 3A) having an output driver (300) in which a first NMOS transistor (310) and a second NMOS transistor (309) are connected in series (Figure 3A), a drain of the first

Application/Control Number: 10/607,634

Art Unit: 2818

NMOS transistor is connected to an output pad (311), and the source of the second NMOS transistor is connected to a ground voltage (Figure 3A), wherein:

a first internal voltage (VDDint) is applied to the gate of the first NMOS transistor (310) and a second internal voltage (coupled to 309) is applied to the gate of the second NMOS transistor (309), and a voltage level of the second internal voltage is lower than the voltage level of an external supply voltage (Column 5, lines 23-26, Column 6, lines 15-31, lines 53-65).

Regarding claims 2-3,5, Nguyen discloses wherein the second internal voltage is generated directly from an internal voltage generating circuit of the semiconductor memory device or is externally applied (Column 6, lines 15-38), and wherein the voltage level of the second internal voltage is different from the level of an operating voltage of the semiconductor memory device (Column 1, lines 11-31) as claims 3, 5 disclose.

Regarding claims 7-10, Nguyen discloses a semiconductor memory device (Figure 4) having an output driver (400) in which a first NMOS transistor (410) and a second NMOS transistor (409) are connected in series, the drain of the first NMOS transistor is connected to an output pad (411), and the source of the second NMOS transistor is connected to a ground voltage, and having a precharge transistor (405B) of which the source is connected to a connection node of the first NMOS transistor and the second NMOS transistor and of which drain is connected to a supply voltage, wherein the precharge transistor includes a voltage compensating circuit for lowering the rise in the voltage level of the connection node due to the rise in the voltage levle of the gate of the first NMOS transistor (Column 6, lines 53-55), and wherein the voltage

Application/Control Number: 10/607,634 Page 6

Art Unit: 2818

compensating circuit comprises a capacitor (Figure 2, 212) which is connected between the gate and the source of the precharge transistor.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thong Q. Le whose telephone number is 571-272-1783. The examiner can normally be reached on 8:00am-5:00pm M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David C. Nelms can be reached on 571-272-1787. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
